LANDINGS  
DEBARQUEMENTS

SYMBOLS USED IN THIS PUBLICATION  
SIGNES CONVENTIONNELS APPARAISSANT DANS CETTE PUBLICATION

- 0 Amount too small to be expressed.  
Nombres infimes.
- Nil or zero.  
Nulle ou zéro.
- ... Not applicable because of different units of measurements.  
N'ayant pas lieu de figurer à cause de différentes unités.
- Figures not available.  
Chiffres non disponibles.

NOTE: All the current statistics are preliminary and subject to revision as more data become available.

Toutes les statistiques courantes sont préliminaires et sujettes à être révisées jusqu'à ce que des chiffres plus exacts soient disponibles.

## **Landings Quarterly Highlights**

Based on preliminary data for the first three months, landings on the Atlantic coast were 125 792 tonnes valued at \$59.9 million, representing a decrease of 4% in landings but a 2% increase in value compared to 1984. Groundfish landings were down slightly from last year with major decreases reported for cod and small flatfishes. Haddock, redfish, and pollock landings showed increases. Herring landings showed a 27% increase. Shellfish landings decreased by 26% mainly due to the decrease of scallop landings.

Landings for the Pacific Coast were reported at 29 545 tonnes, a decrease of 10% from last year. Herring landings were down by 17%. Groundfish and shellfish landings increased over last year.

For specific results, readers should refer to the summary and detailed tables.

## **Débarquements Faits Saillants Trimestriels**

Les débarquements préliminaires pour les trois premiers mois sur la côte de l'Atlantique étaient de 125 792 tonnes évalués à 59.9\$ millions, démontrant une baisse de 4% aux débarquements mais une augmentation de 2% en valeur, comparativement à l'année 1984. Les débarquements de poissons de fond démontraient des baisse majeures pour la morue et les petits poissons plats. Les débarquements d'aiglefin de sébaste et de goberge démontraient une augmentation. Les débarquements de hareng augmentaient de 27%. Les débarquements des mollusques et crustacés déclinaient de 26% à cause de la déclin de pétoncles.

Sur la côte du Pacifique les débarquements se chiffraient à 29 545 tonnes soit une baisse de 10% au dessous de l'année dernière. Les débarquements de hareng démontraient une baisse de 17%. Les débarquements de poissons de fond et mollusques et crustacés augmentaient.

Pour des résultats plus précis, on doit se reporter aux tableaux sommaire et détaillés.

## **Landings Quarterly Highlights**

According to preliminary data for the first six months, landings on the Atlantic Coast were 420 056 tonnes valued at \$289 million, representing a decrease of 5% in landings but a 8% increase in value. Groundfish landings were down from last year, major decreases were reported for cod, redfish and small flatfishes while haddock, and pollock landings showed increases. Pelagic fish landings decreased mainly due to the decreased landings of capelin, on the other hand shellfish landings increased by 20% mainly due to the increased landings of scallops and lobster.

Landings on the Pacific Coast were reported at 51 481 tonnes, a decrease of 9% from last year. Groundfish landings increased slightly in 1984 while herring and salmon landings decreased. Shellfish landings increased 29% over 1984.

For specific results, readers should refer to the summary and detailed tables.

## **Débarquements Faits Saillants Trimestriels**

Les débarquements préliminaires pour les six premiers mois sur la côte de l'Atlantique étaient de 420 056 tonnes évalués à 289\$ millions, démontrant une baisse aux débarquements de 5% tandis que la valeur augmentait de 8%. Les débarquements de poissons de fond démontraient des baisse majeures pour la morue, le sébaste et les petits poissons plats tandis que les débarquements d'aiglefin et de goberge démontraient une augmentation. Les débarquements des poissons pélagiques démontraient une baisse à cause de la déclination des débarquements de capelin, tandis que les mollusques et crustacées augmentaient de 20% à cause des débarquements des pétoncles et homards.

Les débarquements sur la côte du Pacifique se chiffraient à 51 481 tonnes, soit une baisse de 9% au dessous l'an dernier. Les débarquements de poissons de fond démontraient une augmentation en 1985 tandis que le hareng et le saumon déclinaient. Les débarquements de mollusques et crustacés démontraient une augmentation de 29% vis-à-vis l'année 1984.

Pour des résultats plus précis, on doit se rapporter aux tableaux sommaire et détaillés.

## **Landings Quarterly Highlights**

According to preliminary figures for the first nine months, landings on the Atlantic Coast were 905 314 tonnes valued at \$483.2 million, representing an increase of 2% in landings and 5% in landed value compared to 1984.

Major increases in landings were reported for herring, Mackerel and scallop. Groundfish landings decreased from last year, mainly due to decreased landings of cod and small flatfish.

Landings on the Pacific Coast were reported at 154 442 tonnes, an increase of 44% from last year. Salmon landings almost doubled last year's level. Landings of groundfish and shellfish also showed improvement while herring landings were down significantly from last year.

For specific results, readers should refer to the summary and detailed tables.

## **Débarquements Faits Saillants Trimestriels**

Les débarquements préliminaires pour les neuf premiers mois sur la côte de l'atlantique étaient de 905 314 tonnes évalués à \$483.2 millions, démontrant une augmentation aux débarquements de 2% et 5% à la valeur, comparativement à l'année 1984.

Des augmentations majeures se trouvent aux débarquements de hareng, de macquereau et des pétoncles. On trouve une baisse aux débarquements de poissons de fond à cause d'une baisse de débarquement de la morue et des petits poissons plats.

Les débarquements sur la côte du Pacifique se chiffraient à 154 442 tonnes une augmentation de 44% au dessus de 1984. Les débarquements de saumon ont presque doublé ceux de l'année dernière. Les débarquements de poissons de fond et les mollusques et crustacés démontrent une augmentation tandis que les débarquements de hareng démontraient une baisse significative comparativement à l'année passée.

Pour des résultats plus précis, on doit se reporter aux tableaux sommaires et détaillés.

## **Landings Quarterly Highlights**

According to preliminary statistics on 1985, landings on the Atlantic Coast were 1 152 665 tonnes valued at \$655 million, representing an increase in both landings and values of 9% and 11%, respectively, over 1984. Cod landings remained approximately the same level as last year, while increases were reported in landings of haddock, small flatfish and redfish. Landings of herring, mackerel, scallop and lobster all rose significantly from 1984.

Landings on the Pacific Coast were reported at 194 326 tonnes, an increase of 62% from 1984. Salmon landings reached a record total of 107 102 tonnes, a 130% increase from last year. Groundfish and shellfish also registered increases in landings.

For specific results, readers should refer to the summary and detailed tables.

## **Débarquements Faits Saillants Trimestriels**

Les débarquements préliminaires pour l'année 1985, sur la côte de l'atlantique étaient de 1 152 665 tonnes évalués à \$655 million, démontrant une augmentation aux débarquements et valeurs de 9% et 11% respectivement au dessus de l'année 1984. Les débarquements de la morue restent approximativement au même niveau que l'année dernière,, tandis que des augmentations étaient rapportés aux débarquements de l'Aiglefin, les petits poissons plats et le sébaste. On trouve une hausse significative au dessus de l'année 1984 aux débarquements de hareng, le maquereau, les pétoncles et le homnard.

Les débarquements sur la côte du pacifique se chiffraient à 194 326 tonnes, une augmentation de 62% au dessus de l'année 1984. Les débarquements de saumon enregistraient 107 102 tonnes, une hausse de 130% au dessus de l'an passé. Les débarquement des poissons de fond et des mollusques et crustacés démontraient une augmentation.

Pour des résultats plus précis, on doit se reporter aux tableaux sommaires et détaillés.

TOTAL .....	11 855	---	9 075	---	---	---
Miscellaneous items - items divers: .....	...	---	...	---	---	---
GRAND TOTAL	194 326	---	119 927	---	---	---

\* Does not include over-the-side sales of hake to foreign vessels.  
Ne y comprend pas les ventes de merluche aux bateaux étrangers.

Note: Landings taken from British Columbia Commercial Catch Report.  
Les débarquements proviennent du rapport sur les prises commerciales du poisson de la Colombie-Britannique.

The 1984 figures shown are not directly comparable to the current year's figures as the method of deriving these figures have changed slightly.  
Les chiffres de 1984 ne sont pas directement comparables au chiffres de l'année courante car la méthode pour obtenir ces chiffres a changé.

## **Landings Quarterly Highlights**

Based on preliminary data for the first three months, landings on the Atlantic Coast were 160 024 tonnes valued at \$81.3 million, representing an increase of 27% in volume and 36% in value compared to 1985. Groundfish landings rose by 27% from last year, mainly in haddock and cod. Landings of herring, lobster and scallops also increased.

Landings on the Pacific Coast were reported at 18 442 tonnes, a decrease of 38% from 1985. Herring landings were significantly lower compared to the same period last year, while groundfish and shellfish landings showed increases.

For specific results, readers should refer to the summary and detailed tables.

## **Débarquements Principales données trimestriels**

D'après les données préliminaires pour les trois premiers mois, les débarquements sur la côte de l'Atlantique ont totalisé 160 024 tonnes d'une valeur de 81,3 millions de dollars, soit une augmentation de 27 p. 100 en volume et de 36 p. 100 en valeur par rapport à 1985. Les débarquements de poissons de fond ont augmenté 27 p. 100 depuis l'année dernière, principalement ceux de l'aiglefin et de la morue. Les débarquements de hareng, de homard et de pétoncle étaient à la hausse également.

Sur la côte du Pacifique, les débarquements se chiffraient à 18 442 tonnes, soit une diminution de 38 p. 100 comparativement à 1985. Les débarquements de hareng ont considérablement diminué par rapport à la même période de 1985, tandis que les débarquements de poissons de fond, de mollusques et de crustacés ont augmenté.

Les lecteurs pourront trouver des résultats précis en consultant le résumé et les tableaux détaillés.

## **Landings Quarterly Highlights**

According to preliminary data for the first six months, landings on the Atlantic Coast were 523 163 tonnes valued at \$391 million, representing an increase of 22% and 32% respectively. Groundfish landings increased from last year by 13% primarily for cod, haddock, redfish and pollock. Pelagic fish landings increased mainly due to the high capelin landings. Scallop and lobster landings made a major contribution to the 19% increase of shellfish landings.

Landings on the Pacific Coast were reported at 47 865 tonnes, a decrease of 6% from last year. Groundfish landings increased by 31% over 1985 while a major decrease occurred in the herring landings. Shelfish landings increased by 2% from last year.

For specific results, readers should refer to the summary and detailed tables.

## **Débarquements Faits saillants trimestriels**

Selon les données préliminaires recueillies pour les six premiers mois de l'année, les débarquements ont atteint, sur la côte atlantique, 523 163 t d'une valeur estimée à \$391 millions, traduisant des augmentations respectives de 22% et 32%. Les débarquements de poisson de fond ont augmenté de 13% par rapport à l'année dernière, à cause surtout d'une augmentation des débarquements de morue, d'aiglefin, de sébaste et de goberge. Les débarquements de poissons pélagiques ont augmenté, ce qui s'explique principalement par l'augmentation des débarquements de capelan. Le pétoncle et le homard comptent pour beaucoup dans l'augmentation de 19% qu'ont connus les débarquements de mollusques et de crustacés.

Sur la côte du Pacifique, les débarquements ont atteint 47 865 t, soit une diminution de 6% par rapport à l'année dernière. Les débarquements de poisson de fond ont augmenté de 31% par rapport à 1985, mais les débarquements de hareng ont considérablement baissé. Les débarquements de mollusques et de crustacés ont pour leur part augmenté de 2% par rapport à l'année dernière.

Pour des données plus précises, veuillez consulter le tableau qui résume la situation et les tableaux détaillés.

LANDINGS  
DEBARQUEMENTS

SYMBOLS USED IN THIS PUBLICATION  
SIGNES CONVENTIONNELS APPARAISSANT DANS CETTE PUBLICATION

- 0 Amount too small to be expressed.  
Nombres infimes.
- Nil or zero.  
Nulle ou zéro.
- ... Not applicable because of different units of measurements.  
N'ayant pas lieu de figurer à cause de différentes unités.
- Figures not available.  
Chiffres non disponibles.

NOTE: All the current statistics are preliminary and subject to revision as more data become available.

Toutes les statistiques courantes sont préliminaires et sujettes à être révisées jusqu'à ce que des chiffres plus exacts soient disponibles.

**Landings**  
**Quarterly Highlights**

According to preliminary data for the first nine months, landings on the Atlantic Coast were 958 255 tonnes, representing an increase of 6% in landings compared to 1985. Major increases in landings were reported for haddock, redfish and scallop, while herring landings showed a sizeable decline from last year.

Landings on the Pacific Coast were reported at 145 928 tonnes, a decrease of 12% from last year. The decline were primarily due to considerably lower catches of herring and salmon compared to 1985.

For specific results, readers should refer to the summary and detailed tables.

**Débarquements**  
**Faits saillants trimestriels**

D'après des données préliminaires enregistrées au cours des neuf premiers mois sur la côte Atlantique, les débarquements se sont établis à 958 255 tonnes, soit une augmentation de 6% par rapport à 1985. Les débarquements d'aiglefin, de sébaste et de pétoncle ont enregistré une forte augmentation, tandis que les débarquements de hareng ont accusé une baisse marquée par rapport à l'année dernière.

Sur la côte du Pacifique, les débarquements se sont établis à 145 928 tonnes, soit une baisse de 12% par rapport à l'an dernier. Cette baisse est surtout imputable à une diminution considérable des prises de hareng et de saumon par rapport à 1985.

Pour obtenir des résultats plus précis, le lecteur voudra bien consulter le sommaire et les tableaux détaillés.

## **Landings Quarterly Highlights**

According to preliminary year end statistics in 1986, landings on the Atlantic Coast were 1,186,545 tonnes valued at \$830 million, an increase in both landings and value of 3% and 27% respectively over 1985. Cod landings decreased slightly from 1985, but the value increased by 16%. Haddock and redfish landings increased in both volume and value. Landings and values of capelin and shellfish increased significantly in 1986.

Landings on the Pacific Coast were reported at 182,144 tonnes, a decrease of 6% from 1985 primarily due to lower catches of herring. Salmon landings dropped slightly in volume but increased in value. Groundfish landings and value both increased over last year.

For specific results, readers should refer to the summary and detailed tables.

## **Débarquements Faits saillants trimestriels**

Selon les statistiques préliminaires de fin d'année en 1986, les débarquements sur la côte de l'Atlantique ont été de 1 186 545 tonnes d'une valeur de 830 millions de dollars, ce qui représente une augmentation des débarquements et de leur valeur de 3% et 27% respectivement par rapport à 1985. Les débarquements de morue ont baissé légèrement par rapport à 1985 mais leur valeur s'est accrue de 16%. Les débarquements de sébaste et d'aiglefin ont connu une augmentation en termes de volume et de valeur. Les débarquements et les valeurs de capelan ainsi que de mollusques et crustacés ont connu une importante augmentation en 1986.

Les débarquements sur la côte du Pacifique se sont élevés à 182 144 tonnes, soit une diminution de 6% par rapport à 1985, en raison surtout de prises plus faibles de hareng. Le volume des débarquements de saumon a baissé légèrement mais leur valeur a augmenté. Il y a eu une augmentation des débarquements de poisson de fond et de leur valeur par rapport à l'année dernière.

Pour des résultats précis, les lecteurs sont priés se référer au résumé et aux tableaux détaillés.
